

Possible Changes to PD Demand Forecast and IOG

Market Pricing Working Group
September 9, 2005

- **IESO staff are opposed to the idea of changes to pre-dispatch demand forecast for certain hours or days or seasons**
- **The occurrence of surplus internal Ontario resources coincident with IOG payments is primarily caused by export failures rather than the use of peak PD demand forecast**
- **Any possible changes suggested to IOG payments will be discussed with the Intertie Trading Sub-committee, rather than MPWG**
